

Angel Gerardo Cecilio Rodríguez

Full-Stack Software Engineer

📍 Puebla, Mexico ✉ angel.cecilio.dev@gmail.com ☎ +52 238 194 2612 💻 angel-scatman 🌐 angelscatman

Professional Profile

Full-Stack Software Engineer focused on developing production-ready systems tailored to solve real-world operational challenges. Experienced in designing intuitive UX/UI interfaces and building structured backend services that prioritize clean architecture and code maintainability. Proficient in the JavaScript ecosystem (TypeScript, React, Node.js) and cross-platform mobile development (Kotlin, Flutter), including hardware and third-party integrations. Adept at workflow automation. Seeking to join tech-driven teams, with availability for remote setups or relocation, to deliver valuable code that optimizes operational efficiency.

Professional Experience

Full Stack Developer

Puebla, Mexico

Abarrotera Hidalgo de Tehuacán (Bitala Division)

July 2024 – January 2026

Development department responsible for the corporate group's digitalization, creating custom tech solutions for logistics and fleet maintenance.

- Developed ERP modules (React, Node.js, Express), implementing WebSockets for real-time logistics tracking within distribution centers and REST APIs for transactional operations.
- Integrated automated printing hardware (Zebra) into the workflow, developing preview modules for warehouse inventory control and operational asset management.
- Built an independent Python microservice (FastAPI) integrating AI models (DeepSeek-V3) and the pdfplumber library to process bank statements, generating automated JSON structures and reducing manual data entry.
- Developed native and cross-platform mobile applications (Kotlin, Swift, Flutter) to digitize logistics operations and fleet maintenance, implementing geolocation, webhooks, and photographic evidence workflows.
- Refactored critical functions into independent services, reducing the main system's coupling and improving long-term maintainability.
- Standardized development environments using Docker containers, ensuring consistent execution across the technical team.

Backend and Mobile Developer (Internship)

Puebla, Mexico

Abarrotera Hidalgo de Tehuacán (Bitala Division)

March 2024 – July 2024

Key Project: End-to-end digital transformation for a Physiotherapy Center associated with the corporate group.

- Architected and programmed a centralized appointment management system, replacing manual, paper-based tracking.
- Built a native Android application in Kotlin, focused on usability and patient accessibility.
- Implemented the backend architecture using PHP and MySQL, managing real-time availability and scheduling.
- Integrated an automated notification system via Firebase to reduce the no-show appointment rate.

Education

Bachelor's Degree in Computer Systems Engineering

Puebla, Mexico

Instituto Tecnológico de Tehuacán (TecNM)

August 2019 – December 2024

- Status: Degree in progress.
- Specialty Areas: Software Engineering, Data Structures, Object-Oriented Programming (Java).

Technician in Programming

Puebla, Mexico

Centro de Bachillerato Tecnológico Industrial y de Servicios No. 229

August 2016 – July 2019

- Outstanding Achievement: Finalist in the 20th National Prototype Contest (2018) with 'U-API', a custom desktop software built in C# for English language learning.

Additional Skills

Programming Languages: JavaScript (TypeScript), Kotlin, PHP, Python, SQL. (Academic/Project foundations: C#, Java, Swift)

Frameworks & Libraries: React.js, Node.js (Express), Flutter, FastAPI, OpenCV

Infrastructure & Tools: Docker, Git/GitHub, Postman, Linux, WebSockets

Databases: MySQL, SQLite, Firebase

UX/UI Design: Figma (Research, Wireframing, Prototyping)

Languages: Spanish (Native), English (Advanced technical reading, conversational)

Core Competencies: Modular Architecture Design, Hardware Integration, Operational Problem Solving, Adaptability
